Summary

Frontend developer with a strong foundation in React and modern JavaScript, passionate about building clean, responsive, and user-friendly interfaces. I enjoy working with component-based architectures, translating UI/UX designs into real products, and continuously improving performance and code quality. Alongside frontend development, I have hands-on experience collaborating with backend systems (REST APIs, databases, and authentication flows), which helps me understand the full product lifecycle and work effectively with backend teams.

Work Experience

Car Rental Reservation Platform - Frontend Developer - (2024 – 2025)

TypeScript, Next.js, React, Redux, Axios, Tailwind CSS, PostgreSQL, REST API

- Developed a location-based car rental reservation platform enabling users to book vehicles across multiple countries.
- Implemented complex product filtering logic that triggered API calls and full page re-renders on each filter change, ensuring accurate and up-to-date results.
- Designed and optimized a responsive UI for a highly dynamic layout, overcoming major challenges caused by complex component compositions.
- Integrated frontend with RESTful APIs using Axios and Redux for predictable state management.
- Improved overall user experience by stabilizing UI behavior during frequent data updates and re-renders.
- Collaborated with backend services to align data structures and API responses with frontend requirements.

Legal Case Management System (Lawyers Platform) - Frontend Developer - (2023 – 2024)

TypeScript, React, NestJS, Axios, Zustand, Tailwind CSS, RSuite, DatePicker, PostgreSQL

- Built a digital case management system allowing lawyers to create cases and upload documents (PDFs and images), eliminating physical file storage.
- Played a key role in shaping the frontend-first development approach by designing UI components before finalizing backend APIs.
- Learned and applied effective API integration strategies by mapping each page and component to its required endpoints.
- Implemented clean and reusable UI components using Tailwind CSS and RSuite.
- Managed global and local state efficiently using Zustand.
- Worked closely with backend logic and database structure to ensure smooth data flow and reliable file handling.
- Gained strong experience in handling evolving requirements in projects with unclear initial objectives.

E-commerce Platform (Digikala-inspired) - Frontend Developer

TypeScript, React, React Query, Axios, Zustand, Tailwind CSS, MongoDB, PostgreSQL, NestJS

- Developed both frontend and backend features for a scalable e-commerce platform inspired by Digikala.
- Implemented fully organized API integrations using React Query for efficient data fetching and caching.
- Refactored and categorized API calls into clearly documented, significantly improving maintainability and readability.
- Built reusable UI components and managed application state using Zustand.
- Improved developer experience by documenting APIs and standardizing data-fetching patterns across the project.
- Collaborated across frontend and backend layers to ensure consistency between UI behavior and business logic.

Skills

Languages: JavaScript (ES6+), TypeScript, SQL

Web Frameworks and Libraries: Next.js, React, Redux, Redux Toolkit, NestJS, ShadCN/UI, MaterialUI, TailwindCSS

Tools & Platforms: Docker, Git, GitLab CI/CD, Figma, Trello

Education

Associate of Science (A.S.) in Computer Software Engineering (2019)
